Elsevier Scientific Publishers Ireland Ltd.

MECHANISMS OF AGEING AND DEVELOPMENT

SUBJECT INDEX

Volume 48 (1989)

acetone induction, aging, rat liver microsomal drug metabolism, ethanol induction, glutathione, 267
actin, aging, fibronectin, extracellular matrix, cell migration, cell adhesion, 101
action potential, development, ageing, myocardium, high energy phosphates, contractile performances, 243
activity, caloric restriction, intermediary metabolism, enzyme, liver, 179
aflatoxin B_1, caloric/dietary restriction, carcinogenesis, DNA binding, DNA synthesis, aging, lysosomal enzymes, 167
age-related changes, feedback mechanism, economic correction, receptor density, mRNA coding for IL-1, CD-8 on thymocytes, 111
ageing, development, myocardium, high energy phosphates, action potential, contractile performances, 243
ageing, DNA repair, O^6-methylguanine-DNA methyltransferase, methyladenine-DNA *N*-glycosylase, tissue specificity, 43
ageing, erythrocyte, reticulocyte, glyoxalase, 63
ageing, glucose transport, intestinal membranes, 33
aging, bone marrow, GM-CFC, CFU-S, 91
aging, caloric/dietary restriction, aflatoxin B_1, carcinogenesis, DNA binding, DNA synthesis, lysosomal enzymes, 167
aging, cytochrome *P*-450, monooxygenases, drug metabolism, caloric restriction, nutrition, 145
aging, fibronectin, extracellular matrix, cell migration, cell adhesion, actin, 101
aging, food restriction, reduced glutathione, catalase, cytosol antioxidants, 221
aging, food restriction, subcellular membranes, fatty acids, vitamin E, 207
aging, hepatic lipid peroxidation, mouse, 85
aging, ion flux, muscarinic, salivary gland, secretion, 231
aging, rat liver, microsomal drug metabolism, ethanol induction, acetone induction, glutathione, 267
aging, UDP-glucuronyltransferase, glutathione-*S*-transferase, sulfotransferase, epoxide hydrolase, caloric restriction, 157
bone marrow, aging, GM-CFC, CFU-S, 91
buoyant density, human central myelin, old age, lipids, fatty acids, 1
caloric, restriction, physiological, metabolism, male, rat, 117
caloric/dietary restriction, aflatoxin B_1, carcinogenesis, DNA binding, DNA synthesis, aging, lysosomal enzymes, 167
caloric restriction, cytochrome *P*-450, monooxygenases, drug metabolism, aging, nutrition, 145
caloric restriction, intermediary metabolism, enzyme, activity, liver, 179
caloric restriction, UDP-glucuronyltransferase, glutathione-*S*-transferase, sulfotransferase, epoxide hydrolase, aging, 157
carcinogenesis, caloric/dietary restriction, aflatoxin B_1, DNA binding, DNA synthesis, aging, lysosomal enzymes, 167
catalase, aging, food restriction, reduced glutathione, cytosol antioxidants, 221
catalase, neonatal cerebral development, CuZn- and Mn-superoxide dismutase, glutathione peroxidase, cytochrome *c* oxidase, mitochondria, 15
CD-8 on thymocytes, feedback mechanism, economic correction, age-related changes, receptor density, mRNA coding for IL-1, 111
cell adhesion, aging, fibronectin, extracellular matrix, cell migration, actin, 101
cell migration, aging, fibronectin, extracellular matrix, cell adhesion, actin, 101
central monoamines, chronic caloric restriction, Fischer 344 rats, 191
CFU-S, aging, bone marrow, GM-CFC, 91
chronic caloric restriction, central monoamines, Fischer 344 rats, 191
contractile performances, development, ageing, myocardium, high energy phosphates, action potential, 243

CuZn- and Mn-superoxide dismutase, neonatal cerebral development, catalase, glutathione peroxidase, cytochrome *c* oxidase, mitochondria, 15
cytochrome *c* oxidase, neonatal cerebral development, CuZn- and Mn-superoxide dismutase, catalase, glutathione peroxidase, mitochondria, 15
cytochrome *P*-450, monooxygenases, drug metabolism, caloric restriction, aging, nutrition, 145
cytosol antioxidants, aging, food restriction, reduced glutathione, catalase, 221

development, ageing, myocardium, high energy phosphates, action potential, contractile performances, 243
diet, female, puberty, reproductive aging, 73
dietary restriction, DNA repair, ultraviolet light, methylmethane sulfonate, unscheduled DNA synthesis, O^6-methylguanine-acceptor protein activity, 135
dietary restriction, *myc* protooncogene expression, 199
DNA binding, caloric/dietary restriction, aflatoxin B_1, carcinogenesis, DNA synthesis, aging, lysosomal enzymes, 167
DNA repair, ageing, O^6-methylguanine-DNA methyltransferase, methyladenine-DNA *N*-glycosylase, tissue specificity, 43
DNA repair, dietary restriction, ultraviolet light, methylmethane sulfonate, unscheduled DNA synthesis, O^6-methylguanine-acceptor protein activity, 135
DNA synthesis, caloric/dietary restriction, aflatoxin B_1, carcinogenesis, DNA binding, aging, lysosomal enzymes, 167
drug metabolism, cytochrome *P*-450, monooxygenases, caloric restriction, aging, nutrition, 145

economic correction, feedback mechanism, age-related changes, receptor density, mRNA coding for IL-1, CD-8 on thymocytes, 111
elderly, lymphocyte immunophenotyping, flow cytometry, 255
embryonal carcinoma, proto-oncogenes, *erbB, src,* neural differentiation, 53
enzyme, caloric restriction, intermediary metabolism, activity, liver, 179
epoxide hydrolase, UDP-glucuronyltransferase, glutathione-*S*-transferase, sulfotransferase, caloric restriction, aging, 157
erbB, proto-oncogenes, *src,* embryonal carcinoma, neural differentiation, 53
erythrocyte, reticulocyte, glyoxalase, ageing, 63
ethanol induction, aging, rat liver, microsomal drug metabolism, acetone induction, glutathione, 267
extracellular matrix, aging, fibronectin, cell migration, cell adhesion, actin, 101

fatty acids, aging, food restriction, subcellular membranes, vitamin E, 207
fatty acids, human central myelin, old age, buoyant density, lipids, 1
feedback mechanism, economic correction, age-related changes, receptor density, mRNA coding for IL-1, CD-8 on thymocytes, 111
female, puberty, reproductive aging, diet, 73
fibronectin, aging, extracellular matrix, cell migration, cell adhesion, actin, 101
Fischer 344 rats, chronic caloric restriction, central monoamines, 191
flow cytometry, elderly, lymphocyte immunophenotyping, 255
food restriction, aging, reduced glutathione, catalase, cytosol antioxidants, 221
food restriction, aging, subcellular membranes, fatty acids, vitamin E, 207

glucose transport, ageing, intestinal membranes, 33
glutathione, aging, rat liver, microsomal drug metabolism, ethanol induction, acetone induction, 267
glutathione-*S*-transferase, UDP-glucuronyltransferase, sulfotransferase, epoxide hydrolase, caloric restriction, aging, 157
glutathione peroxidase, neonatal cerebral development, CuZn- and Mn-superoxide dismutase, catalase, cytochrome *c* oxidase, mitochondria, 15
glyoxalase, erythrocyte, reticulocyte, ageing, 63
GM-CFC, aging, bone marrow, CFU-S, 91

hepatic lipid peroxidation, aging, mouse, 85
high energy phosphates, development, ageing, myocardium, action potential, contractile performances, 243
human central myelin, old age, buoyant density, lipids, fatty acids, 1

intermediary metabolism, caloric restriction, enzyme, activity, liver, 179
intestinal membranes, ageing, glucose transport, 33
ion flux, aging, muscarinic, salivary gland, secretion, 231

lifespan, reproduction, rotifers, 281
lipids, human central myelin, old age, buoyant density, fatty acids, 1
liver, caloric restriction, intermediary metabolism, enzyme, activity, 179
lymphocyte immunophenotyping, elderly, flow cytometry, 255
lysosomal enzymes, caloric/dietary restriction, aflatoxin B_1, carcinogenesis, DNA binding, DNA synthesis, aging, 167

male, caloric, restriction, physiological, metabolism, rat, 117
metabolism, caloric, restriction, physiological, male, rat, 117
methyladenine-DNA *N*-glycosylase, ageing, DNA repair, O^6-methylguanine-DNA methyltransferase, tissue specificity, 43
O^6-methylguanine-acceptor protein activity, dietary restriction, DNA repair, ultraviolet light, methylmethane sulfonate, unscheduled DNA synthesis, 135
O^6-methylguanine-DNA methyltransferase, ageing, DNA repair, methyladenine-DNA *N*-glycosylase, tissue specificity, 43
methylmethane sulfonate, dietary restriction, DNA repair, ultraviolet light, unscheduled DNA synthesis, O^6-methylguanine-acceptor protein activity, 135
microsomal drug metabolism, aging, rat liver, ethanol induction, acetone induction, glutathione, 267
mitochondria, neonatal cerebral development, CuZn- and Mn-superoxide dismutase, catalase, glutathione peroxidase, cytochrome *c* oxidase, 15
monooxygenases, cytochrome *P*-450, drug metabolism, caloric restriction, aging, nutrition, 145
mouse, aging, hepatic lipid peroxidation, 85
mRNA coding for IL-1, feedback mechanism, economic correction, age-related changes, receptor density, CD-8 on thymocytes, 111
muscarinic, aging, ion flux, salivary gland, secretion, 231
myc protooncogene expression, dietary restriction, 199
myocardium, development, ageing, high energy phosphates, action potential, contractile performances, 243

neonatal cerebral development, CuZn- and Mn-superoxide dismutase, catalase, glutathione peroxidase, cytochrome *C* oxidase, mitochondria, 15
neural differentiation, proto-oncogenes, *erbB, src,* embryonal carcinoma, 53
nutrition, cytochrome *P*-450, monooxygenases, drug metabolism, caloric restriction, aging, 145

old age, human central myelin, buoyant density, lipids, fatty acids, 1

physiological, caloric, restriction, metabolism, male, rat, 117
proto-oncogenes, *erbB, src,* embryonal carcinoma, neural differentiation, 53
puberty, female, reproductive aging, diet, 73

rat, caloric, restriction, physiological, metabolism, male, 117
rat liver, aging, microsomal drug metabolism, ethanol induction, acetone induction, glutathione, 267
receptor density, feedback mechanism, economic correction, age-related changes, mRNA coding for IL-1, CD-8 on thymocytes, 111
reduced glutathione, aging, food restriction, catalase, cytosol antioxidants, 221
reproduction, lifespan, rotifers, 281
reproductive aging, female, puberty, diet, 73
restriction, caloric, physiological, metabolism, male, rat, 117
reticulocyte, erythrocyte, glyoxalase, ageing, 63
rotifers, lifespan, reproduction, 281

salivary gland, aging, ion flux, muscarinic, secretion, 231
secretion, aging, ion flux, muscarinic, salivary gland, 231
src, proto-oncogenes, *erbB,* embryonal carcinoma, neural differentiation, 53
subcellular membranes, aging, food restriction, fatty acids, vitamin E, 207
sulfotransferase, UDP-glucuronyltransferase, glutathione-*S*-transferase, epoxide hydrolase, caloric restriction, aging, 157

tissue specificity, ageing, DNA repair, O^6-methylguanine-DNA methyltransferase, methyladenine-DNA *N*-glycosylase, 43

UDP-glucuronyltransferase, glutathione-*S*-transferase, sulfotransferase, epoxide hydrolase, caloric restriction, aging, 157
ultraviolet light, dietary restriction, DNA repair, methylmethane sulfonate, unscheduled DNA synthesis, O^6-methylguanine-acceptor protein activity, 135
unscheduled DNA synthesis, dietary restriction, DNA repair, ultraviolet light, methylmethane sulfonate, O^6-methylguanine-acceptor protein activity, 135

vitamin E, aging, food restriction, subcellular membranes, fatty acids, 207
